

## Rubicene

V. Sachweh, H. Langhals, 'Synthese von Reinst-Rubicen und Rubicen-Derivaten', *Chem. Ber.* **1990**, 123, 1981-1987.

Synthesis of highly pure rubicene (RN197-61-5) and derivatives of rubicene.

### Rubicene (RN197-61-5) from fluorenone and magnesium in solution of melt biphenyl:

Magnesium turnings (10.0 g, 411 mmol) under argon atmosphere were etched (activated) by means of a small amount of iodine with heating, treated with technical fluorenone (RN486-25-9, 93.7 %, 30.0 g, 156 mmol) and biphenyl (RN92-52-4, 100 g, 650 mmol), heated vigorously at 260-270°C for 51 h (vigorous refluxing of the biphenyl is essential because otherwise the formation of a by-product becomes dominating:  $R_f = 0.65$ , silica gel, toluene), allowed to cool, recrystallised from toluene (150 mL) with the application of a hot extractor (see H. Langhals, *Chem. Ber.* **1985**, 118, 4641.) and washed with toluene for removing some exceeding biphenyl. Yield 5.60 g (22%) light red needles, m.p. 305°C (Ref. 305-307°C).  $R_f$  (silica gel, toluene)= 0.86.
