EXCITED STATE DYNAMICS OF THE Q-BANDS IN CHLOROPHYLL A - A WAVEPACKET PERSPECTIVE

Lena Bäuml, Sebastian Reiter, Regina de Vivie-Riedle

PROJECT OUTLINE

Our research interest

- during photosyntesis chlorophyll adopts different functions
- (absorption, energy transfer, charge separation)
- → studying non-radiative relaxation for deeper understanding of photosynthesis

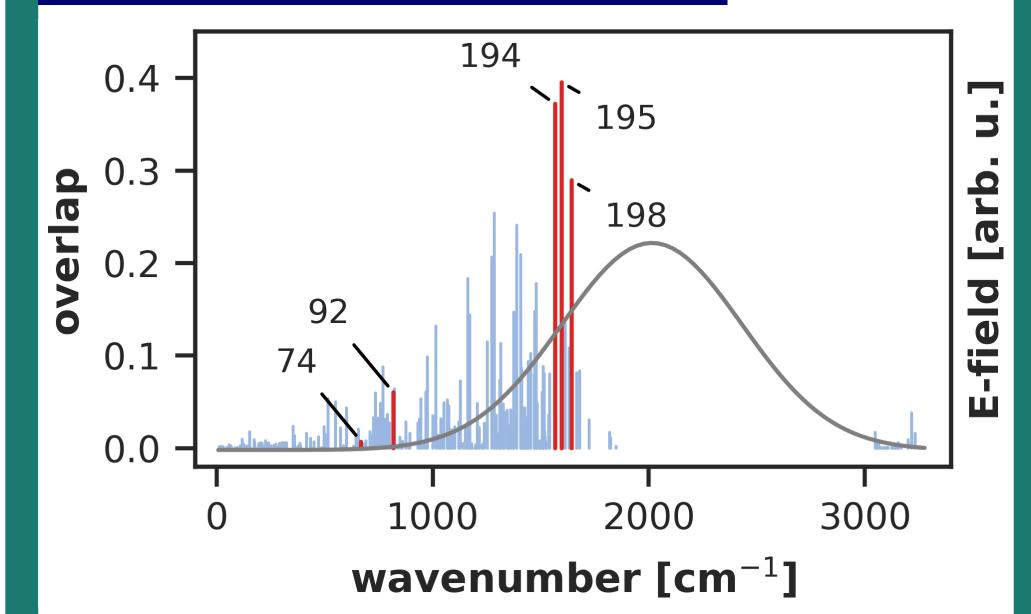

The challenge

- discussion about assignment of Q_X in literature
- CASPT2 energy difference |Q_V Q_X| depending on IPEA and imaginary shift
 - → benchmark of different applied shifts
- high dimensional system challenging for wavepacket dynamics

What we present

- procedure to determine relevance of coordinates
- wavepacket dynamics of laser-excited chlorophyll
- coupled nuclear and electron dynamics

COORDINATE SELECTION

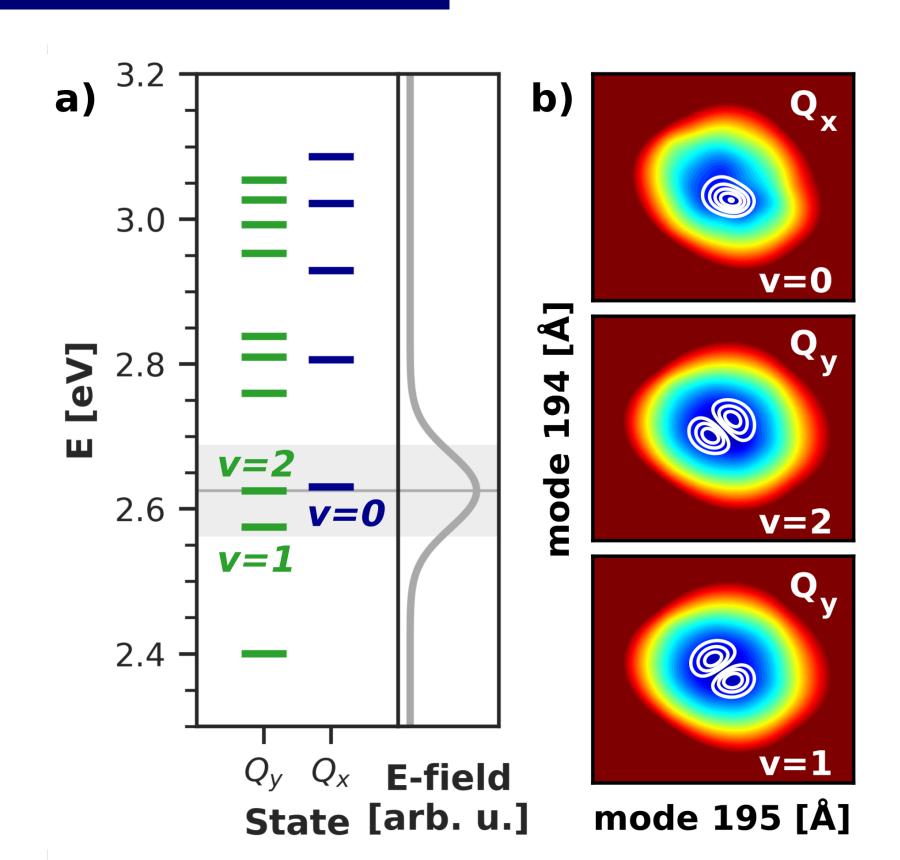

- overlap of normal modes with coupling vector at FC point
 - → multiple modes involved in coupling
- 2D-space spanned by modes of highest overlap
- for comparison: using modes of descending overlap

→ determine relevance of weakly coupled modes

- CASSCF(6/6) consisting of Gouterman orbitals (highlighted in blue) and additional π and π^* orbital

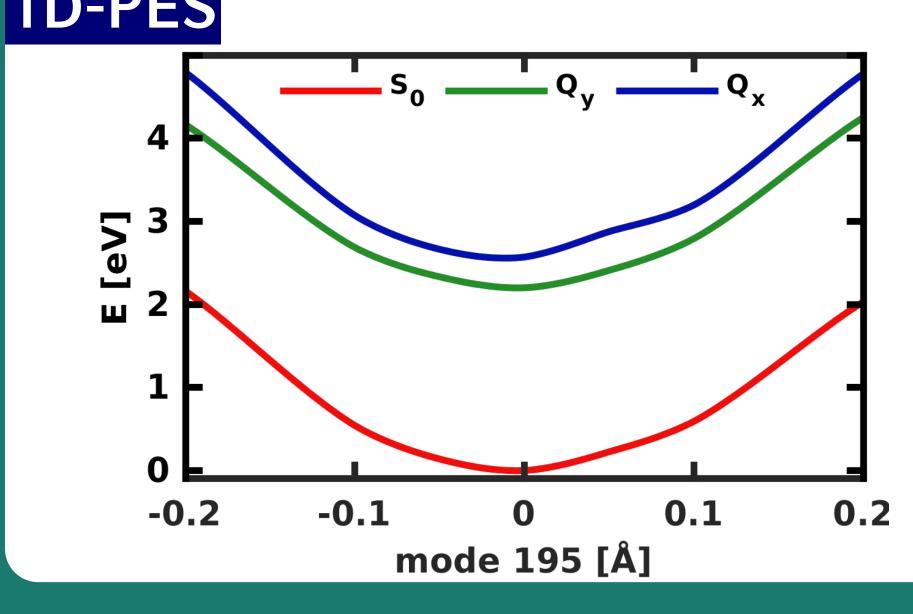

Q_x/Q_y Coupling

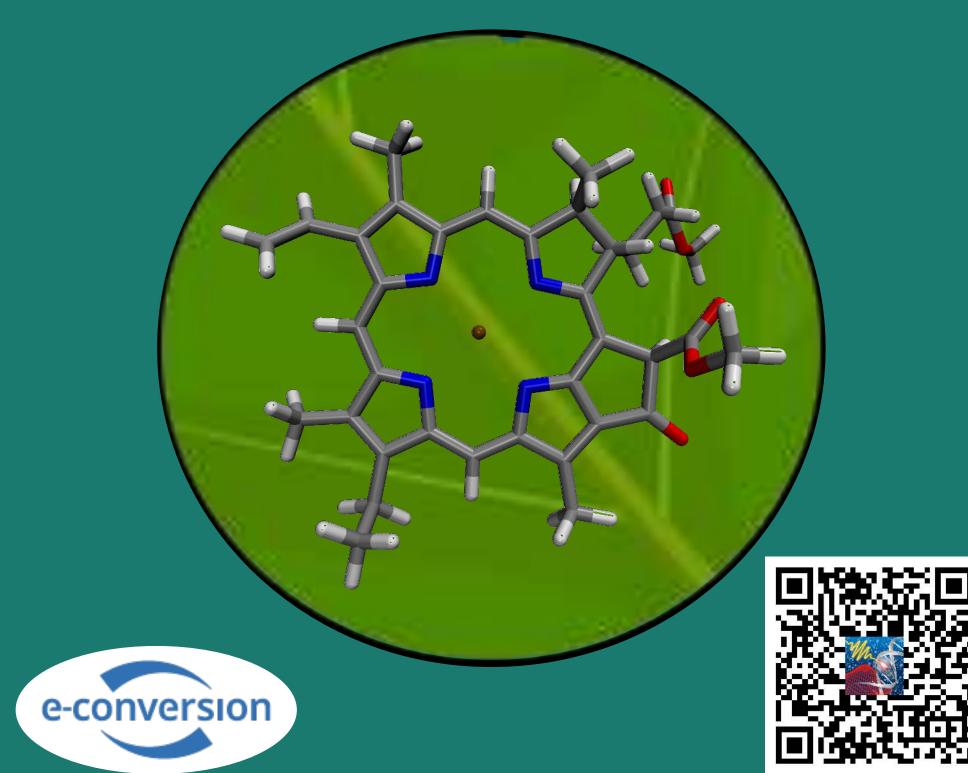

Vibrational energy levels (a) show almost degeneracy between some vibrational eigenfunctions (b) of Q_X and Q_V gray: optimized excitation laser pulse

- → strong coupling between Q_X and Q_y
- → ultrafast population transfer

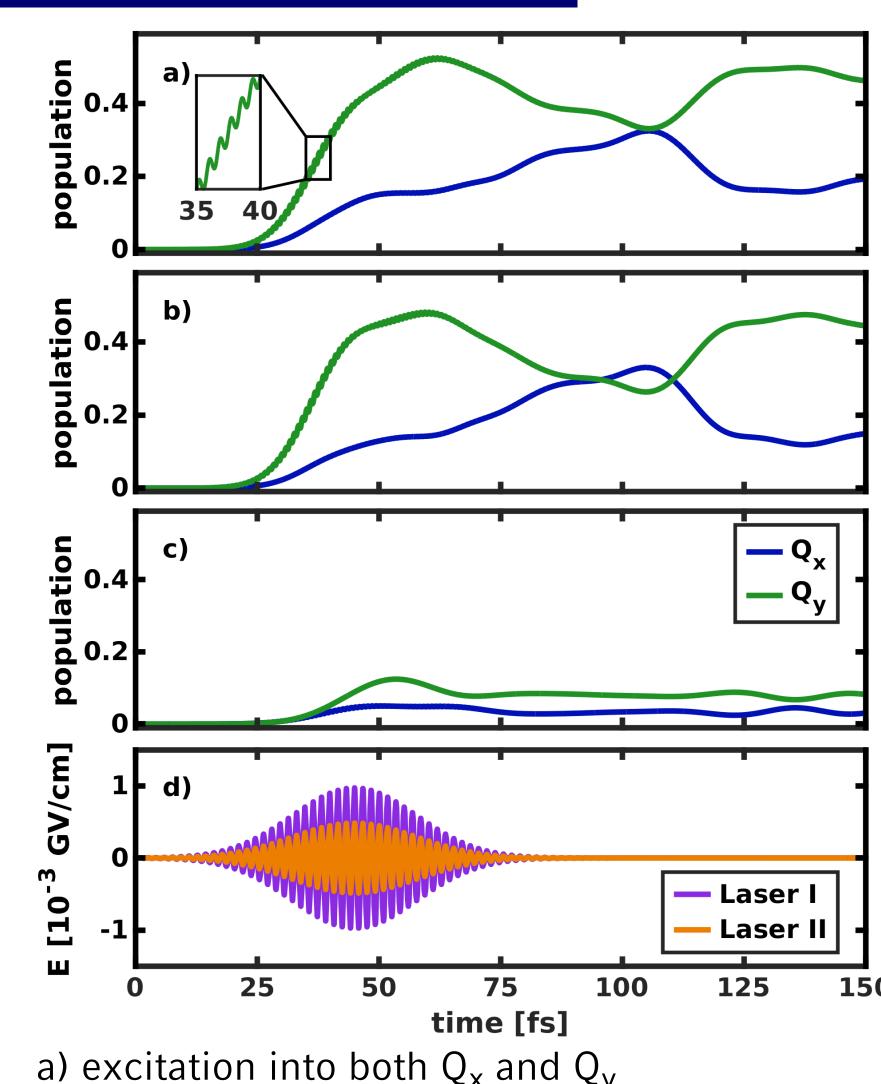

1D-PES

QUANTUM DYNAMICS

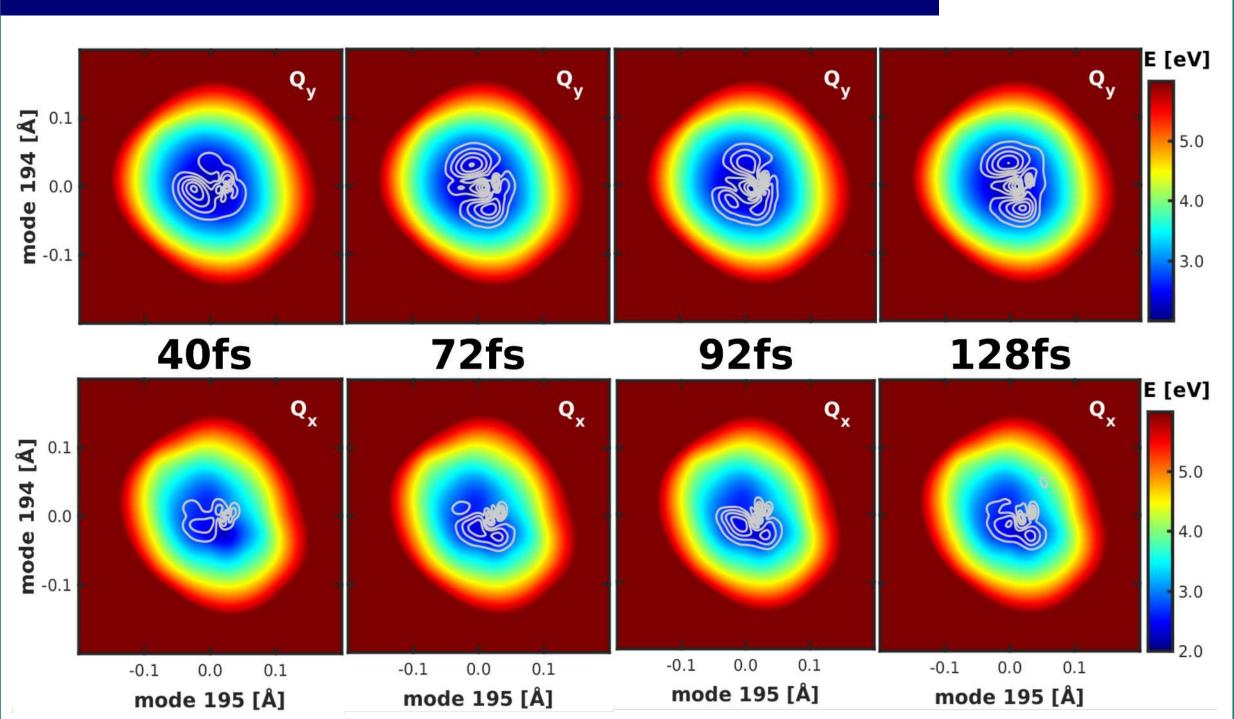

ACTIVE SPACE

- a) excitation into both Q_x and Q_v
- b) excitation only into Q_v
- c) excitation only into Q_x
 - → immediate population transfer between Q_x and Q_y visible

NEMOI

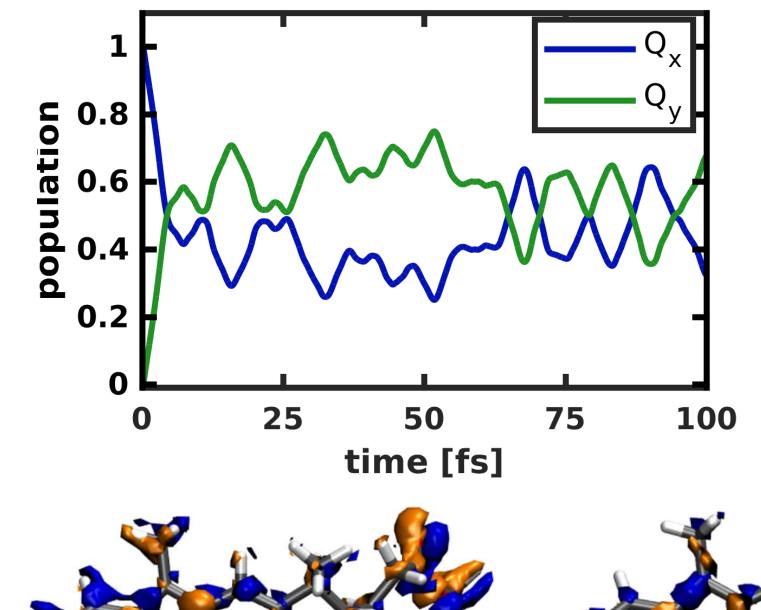

NUCLEAR WAVEPACKET DYNAMICS

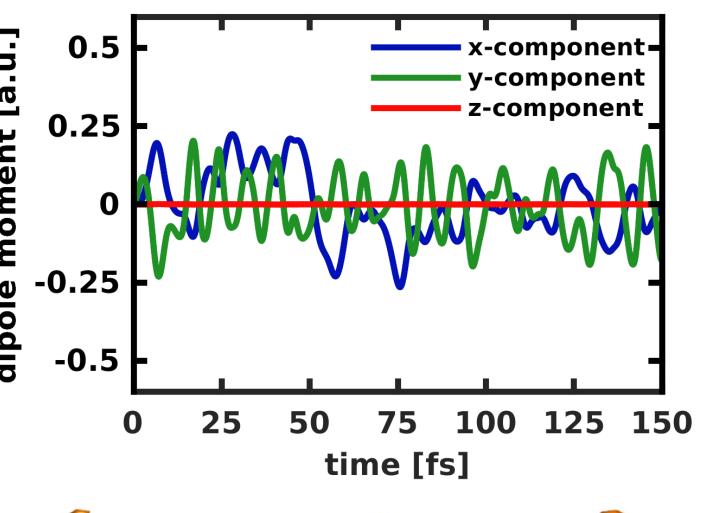

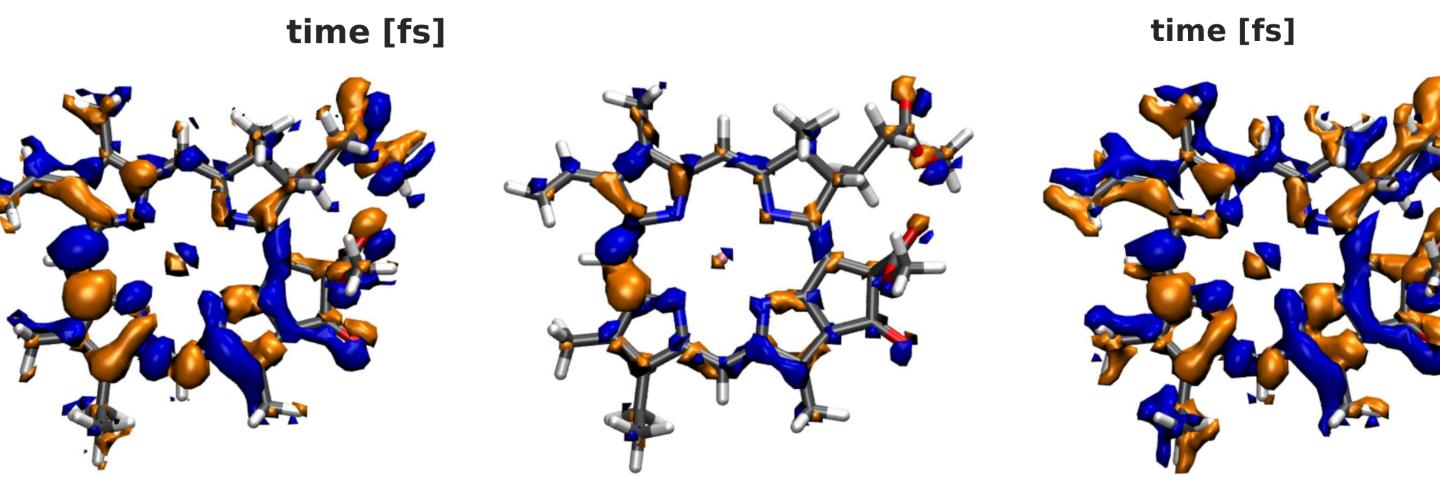

- propagation with excitation pulse into Q_X and Q_V
- 40fs, 92fs: wavepacket resembles v=2 eigenfunction of Q_y and v=0 of Q_X
- 72fs: wavepacket rotates to resemble v=1 of Q_V
- rotation stops around 130fs

COUPLED NEMOL DYNAMICS

simulation without explicit excitation pulse NEMol: determination, visualization of coupled nuclear and electron dynamics induced dipole moment: experimental observable for electronic coherence

18fs 28fs
